PROFILE

I fall for the performance and design of thoughtful user experience web applications that connect to real-world databases, effective outcomes focused on user needs.

PROJECTS

Sep 2022 — Oct 2022

Secret Authentication App

- Sharing secrets is not safe as we know because identity also goes with secrets.
- This app will help in sharing secrets anonymously with complete privacy and social media login.
- Designed app using React, Node.js/Express.js, and MongoDB.
- Created Mobile Responsive User Experience.

Aug 2022 — Sep 2022

Todo App

- Developed a Todo app based on the users' daily life purpose helped to remind them all the time.
- Allowed users to add, update and remove list items as per their requirements.
- Built with React, Node.js/Express.js, and MongoDB.
- Lack/Loss of data in some web applications creates issues while loading the page due to the unavailability of data in the database.
- But here data remains safely secured and can be accessed without any loss in real-world life.

Aug 2022 — Aug 2022

Keeper App

- Designed a Keeper app that gives a unique effect(card layout) to every note keeping all things with a distinct title, helping to remember at once.
- Developed full stack app with React, Node.js/Express.js, and MongoDB.
- Allowed users to create various types of notes for different purposes like Academic Notes, Daily Notes, etc.

COURSES

Jul 2022 — Aug 2022
